PROFILE SUMMARY

Java Full Stack Developer with 4.5 years of experience building Java-based web services and enterprise applications using Spring Boot, React, and Angular. Proven track record migrating monolithic systems to microservices architecture, designing REST APIs, and implementing caching and messaging solutions with Redis and Kafka.

TECHNICAL SKILLS

Languages: Java, JavaScript, HTML, CSS

Frameworks: Spring Boot, Spring Data, Spring Security, React JS, Struts, Angular

Architecture & Backend: Microservices, REST APIs, Oracle DB, Redis, Apache Kafka, AOP (AspectJ)

Libraries: Material UI, Bootstrap, React Router

Dev Tools: Git, GitLab, Docker, Docker Compose, Jenkins, Linux

WORK EXPERIENCE

Software Engineer | *Aithent Technologies Private Ltd* | Chennai, Tamil Nadu, India | Nov 2023 – Present

Associate Consultant | *BAssure Solutions Private Ltd* | Chennai, Tamil Nadu, India | Jan 2022 – Sep 2023

Paginator | *TNQ Technologies* | Coimbatore, Tamil Nadu, India | Feb 2021 – Aug 2021

PROJECTS

Protean Forms Migration (Spring Boot, Angular, Oracle, Redis) — *Aithent Technology*

- Migrating a legacy monolithic Protean Forms application to a microservices-based architecture using Spring Boot 3 and Angular 18; redesigned the Oracle database schema and developed new REST APIs to support it.
- Utilized Redis as a caching layer to improve application performance and scalability.
- Leading modularization and API development across form-related services, ensuring optimized performance and reusability.

Protean Forms (Java, Struts, Angular.js) — *Aithent Technology*

- Developed a dynamic form generation system for Maryland Judiciary Court, automating the filing of yearly cases, with business logic for dynamic field visibility based on user events and inputs.
- enabling clients such as Landmark and Axos Bank to create and process fraud-related cases efficiently through configurable forms and workflows.
- Integrated multiple internal applications, ensuring seamless data flow between forms and external systems.
- Generated dynamic PDFs from user input, reducing paperwork and streamlining the judicial process.

Aithent Common Component (Java, Spring Boot, Kafka) — *Aithent Technology*

- Developed a centralized logging solution using AspectJ (AOP) to log every method before and after execution, and integrated it with Kafka for selective log pushing and improved scalability.
- Built a common exception handler and controller advice layer to handle errors uniformly across applications.
- Created a standardized CommonResponseEntity for API responses, including pagination support, improving code reusability and consistency.

Raeen – Betting Application (Java, Redis) — *BAssure Solutions Pvt Ltd*

- Contributed to building three microservices, including a Redis-based queuing system to handle concurrent customer bet requests.
- Implemented betting calculation and customer transaction logic, using Redis cache layer for frequently accessed data.
- Utilized Redis Pub/Sub for real-time communication between components.

Flash Card – Quiz Application (React) — *BAssure Solutions Pvt Ltd*

- Developed and maintained the front-end interface of an e-learning platform, ensuring a user-friendly experience.
- Collaborated with the backend team to integrate APIs for seamless data retrieval, and worked in an Agile environment with sprint planning, daily stand-ups, and code reviews.

EDUCATION

B.Sc. Computer Science

K.S. Rangasamy College of Arts and Science

2017 – 2020
